

23. The method of Claim 20, wherein the instruction means automatically can send the received data when the first memory means exceeds a predetermined threshold.
24. The method of Claim 20, wherein the instruction means can send the received data in real time to a selected destination.
25. The method of Claim 20, wherein the host can send data via the wireless module to the wireless device.
26. The method of Claim 25, further comprising:
wherein the host can send data in real time via the wireless module to the wireless device.
27. The method of Claim 20, Wherein the wireless device being a digital camera, PDA, laptop, MP3 player, or a wireless flash memory device.
28. The method of Claim 20, further comprising:
wherein the wireless device connectable to an ISDN, Cellular or DSP network.
29. The method of Claim 20, further comprising:
wherein the wireless module being integrated into the wireless device.
30. An apparatus for managing data for a wireless device, comprising:
a first memory means for storing received data of a wireless device;
a second memory means for storing a network operational file, said operational file consisting of instructions for selecting a destination using a wireless module of said wireless device, and
instruction means for operating the network operational file for sending the received data using the wireless module to the selected destination.

31. A system for managing data in a wireless device, comprising:
a wireless module;
at least a singular source means of data stored in a memory module means of
said wireless module; and
- 5 a configuration means coupled to the memory module, wherein said
configuration means transferring the stored data to a host means having an external
memory location at a predetermined point.
